

OregonMines

Colocation - Development - Growth

Who are we?

OregonMines is a multi-facility colocation provider, that specializes in bulk data processing, with a focus on Cryptocurrency. Our centers provide short term and long term hosting services for clients of all sizes.

After mining for most of 2013 in Shenzhen China, we decided it was time to bring the business stateside, and found the Gorge area.

We support the development of crypto, powered facilities, and community growth models.

Basic Before

Developed After

Why the Gorge?

The Pacific NW region in general is known for its' lower than average industrial rate power. Cheap and abundant power is a major draw, as it has been since the advent of hydro in the region.

Moderate weather and low relative humidity is critical for increasing cooling system efficiencies.

From our Northernmost facility to our newest in Cascade Locks, the area is rich in fiber connectivity.

Where are we going?

We are currently mid development on our latest center in Cascade Locks.

- 4 MVA has been brought from Existing Substation to Site
- Path to additional 10 MVA is in development, scheduled for EOY 2019
- Retrofit of existing warehouses underway
- Planning for new structural development has begun, with additional utility outside of electrical being upgraded

We are currently investigating two new sites in state, locations TBA.

- We are excited to turn a corner and start working with locales that have expressed a want for crypto, and need help getting partners on site.

Typical retrofits include replacing large sections of walls with fans.

Soon this side of the building will be large intake fascia flanked by large transformers and switchgear. Fiber conduits were also laid.

Wide variety of services provided

For clients, we provide a bevy of services, not limited to Colocation.

- Hardware acquisition and sales
- Training and education services
- International and national logistics
- New market insights
- Mining performance support
- Cooperative purchase planning

For site owners and power generators

- Development planning for sale or use
- Access to a network of large serious professionals who will engage, not simply inquire.
- Setting up strategic partnerships that meet area goals
- Site maintenance, setup or operation services

Should we support crypto?

In most industries, this would be a non-issue, but the short answer, is YES.

At minimum, crypto operations demand for power often outsizes the original location services. That means, that any operation, success or failure leaves behind a more productive property than it found.

What is the ceiling value of a bare warehouse? What is the ceiling value of the same warehouse with an 800 AMP service? While it might not be initially clear, it stands to reason that an improved property would command a higher monthly rate than the a bare service.

Power rich square footage is productive square footage.

Outside the box cooling ideas, in a box! We're excited to work with new designs on each project.

Contacting Oregon Mines

Our website is located at <https://www.oregonmines.com> , where you can use the contact form or other methods to reach us.

We're always interested in new facility options. If you have access to power sub \$0.04 per kWh or generate your own power, contact us. You have a resource, we have a need, let's harness that synergy.
